This section establishes the ownership, distribution, and governance controls for this document.

2.1 Document Information

Attribute	Detail
Document Title	ARA Lead Matrix CRM — Enterprise Business Requirements Document
Document Reference	ARA-BRD-CRM-2026-001
Product / System Name	ARA Lead Matrix CRM (internally "New Ara CRM")
Owning Organisation	ARA Discoveries Technologies
Document Type	Business Requirements Document (BRD)
Version	1.0 — Baseline
Status	Approved for Review
Classification	Confidential
Date of Issue	17 July 2026

2.2 Distribution List

Recipient Role	Purpose
Managing Director / Founder	Strategic approval and sign-off
Head of Operations	Operational validation of processes and workflows
Head of Performance Marketing	Validation of ad-platform integration & reporting scope
Product / Engineering Lead	Technical feasibility and delivery planning
Client Account Managers	Client-facing capability validation
Nominated Enterprise Clients	Transparency on delivered platform capabilities

2.3 Approval & Sign-Off

Name / Role	Responsibility	Signature	Date
Business Sponsor	Accept business scope & objectives		
Product Owner	Confirm requirement completeness		
Engineering Lead	Confirm technical feasibility		
Quality Assurance Lead	Confirm testability of acceptance criteria		

Basis of this document. This BRD was produced through a complete, end-to-end review of the delivered source code — backend services, data models, API layer, background jobs, integrations, and

the React front-end — cross-referenced against the operational user guides. It reflects the system *as built and in production*, not a forward looking proposal.

Revision History

All material changes to this document are recorded below. Version numbering follows a major.minor convention.

Version	Date	Author	Summary of Change
0.1	10 Jul 2026	Business Analysis Office	Initial skeleton and section outline drafted.
0.5	14 Jul 2026	Business Analysis Office	System discovery completed across backend, front-end, integrations and data model. Draft requirements populated.
0.9	16 Jul 2026	Business Analysis Office	Business rules, process flows, risks and acceptance criteria added. Internal review incorporated.
1.0	17 Jul 2026	Business Analysis Office	Baseline release. Full 32-section BRD approved for stakeholder circulation.

Reference: Product Delivery Milestones (from change history)

Milestone	Capability Delivered
Foundation	Agency console, client master, staff RBAC, daily lead/entry capture, reporting.
Google Ads	Google Ads sync (campaigns, metrics, keywords), analytics, billing reconciliation.
Meta Ads	One-click Facebook onboarding wizard, campaign/adset/ad/insights sync, lead-form & lead ingestion via webhooks + polling, Meta billing pass-through.
Client Portal	Separate client login, role-based portal (admin / telecaller), live "today" dashboard, EOD & Monthly Abstract reports.
Telecalling Suite	26-column telecalling sheet, inline editing, follow-up automation, DARMANT rule, Excel import/export.
Intelligence	AI campaign insights (Google Gemini), low-balance alerting, ingestion-gap diagnostics.

5 Executive Summary

ARA Lead Matrix is a purpose-built, multi-tenant CRM that runs the day-to-day operations of a digital performance-marketing agency and gives every one of its clients a live, self-service window into their own advertising results.

The agency (**ARA Discoveries**) manages paid advertising on **Meta (Facebook & Instagram)** and **Google Ads** on behalf of a roster of client businesses — predominantly cosmetic, dermatology and hair/skin clinics operating in India (currency ₹ INR, business day anchored to IST). Every advertising rupee generates leads, and every lead must be called, qualified, followed up, and converted into a booked appointment and a paid treatment. Lead Matrix is the single system that connects *ad spend* → *leads* → *telecalling* → *appointments* → *conversions* → *billing* into one source of truth.

The platform is delivered as **two doors into one database**:

- **The Agency Console** — the internal command centre where agency staff onboard clients, connect ad accounts, monitor spend and balances across the whole book of business, compare client performance, and manage users and access.
- **The Client Portal** — a separately-authenticated, branded surface where each client (and their telecallers) see only their own ad performance, work their leads on an Excel-style telecalling sheet, and read live end-of-day and monthly reports.

Data flows in automatically. Campaigns, ad sets, ads, daily performance insights, lead-generation forms and the leads themselves are synchronised from Meta and Google on a recurring schedule, backed by real-time Meta webhooks for instant lead delivery. Advertising spend is reconciled into an immutable, idempotent billing ledger that keeps each client's fund balance accurate to the rupee. A change made on either side of the platform is visible on the other within roughly thirty seconds.

2 AD PLATFORMS INTEGRATED	24 CORE DATA ENTITIES	18 API MODULES	2 AUTHENTICATION REALMS	~57 CLIENTS ONBOARDED
--	------------------------------------	--------------------------	--------------------------------------	------------------------------------

This document specifies the complete business requirements the platform satisfies. It is written for senior management and enterprise clients and describes *every* functional module, the business rules that govern them, the roles that use them, and the measurable outcomes they are expected to deliver.

Strategic value in one line: Lead Matrix replaces a fragile mix of spreadsheets, platform dashboards and manual reconciliations with a single, always-live operational system — improving lead conversion, protecting ad budgets from silent overspend, and giving clients transparent proof of the results they are paying for.

6 Business Background

ARA Discoveries operates as a **performance-marketing agency**. Its commercial model is straightforward: clients place advertising funds with the agency; the agency deploys those funds across Meta and Google campaigns; the campaigns generate enquiries ("leads"); and the value of the engagement is judged by how many leads convert into booked appointments and completed treatments at a controlled cost-per-lead (CPL).

The agency's clients are principally **clinics in the cosmetic, dermatology and hair/skin sector**. Their sales motion is telephone-led: a lead who fills a Facebook form or messages on WhatsApp is called by a **telecaller**, qualified, and — if interested — booked for a consultation and, ultimately, a treatment. The quality of this telecalling operation is the difference between profitable and unprofitable ad spend, which is why the platform treats telecalling as a first-class capability rather than an afterthought.

6.1 The operating reality before Lead Matrix

Historically the agency ran its operation across three disconnected surfaces:

- **Native ad dashboards** (Meta Ads Manager, Google Ads) for spend and campaign metrics — one login per client, per platform, with no cross-client view.
- **Shared spreadsheets** (notably the "GROHAIR — Lead Sheet" telecalling workbook) where telecallers logged every call, response, follow-up and appointment by hand.
- **Manual reconciliation** of how much had been spent against how much each client had funded, tracked informally.

6.2 Why a bespoke platform

Off-the-shelf CRMs model a generic B2B sales pipeline; they do not understand Meta lead-form ingestion, click-to-WhatsApp lead attribution, ad-account balance depletion, or an Indian clinic's telecalling vocabulary (HOT / WARM / COLD / DARMANT / CONSULTED / TREATMENT BOOKED). Lead Matrix was built specifically around these realities so the agency's existing spreadsheet workflow could be preserved *exactly* — the telecalling sheet round-trips to and from the operator's real Excel workbook — while everything around it became automated, multi-tenant and auditable.

Dimension	Characteristic
Industry	Digital advertising / performance marketing agency
End-client vertical	Cosmetic, dermatology, hair & skin clinics
Geography & currency	India · ₹ INR · IST (Asia/Kolkata) business day
Advertising channels	Meta (Facebook/Instagram), Google Ads
Primary sales motion	Telecalling → consultation → treatment booking
Commercial model	Client-funded ad budgets managed by the agency; balance-based billing

7 Business Vision

To operate the entire agency — every client, every ad rupee, every lead and every telecall — from one live, transparent platform that both the agency and its clients trust as the single source of truth.

7.1 Vision statement

"One platform where advertising spend, lead generation, telecalling and results are connected end-to-end, visible in real time, and provable to the client — so that no lead is lost, no budget is silently overspent, and every client can see exactly what their money is buying."

7.2 Guiding principles

Principle	What it means in practice
Single source of truth	Leads, spend and results live in one database; no side spreadsheets to reconcile. Every screen reads the same underlying numbers.
Live by default	Both experiences refresh automatically; a lead updated by a telecaller appears in dashboards and reports within ~30 seconds.
Client transparency	Clients log in to see their own performance, leads and reports directly — reducing status-request overhead and building trust.
Preserve the workflow	The telecalling experience mirrors the team's existing spreadsheet one-to-one and imports/exports the real Excel file, so adoption requires no re-training.
Protect the money	Every spend and payment is written to an immutable, idempotent ledger; balances are always defensible; low balances are surfaced before ads auto-pause.
Automate the mechanical	Follow-up reminders, history logging, dormant-lead flagging and reporting roll-ups happen automatically so humans focus on calling and closing.

7.3 Target end-state

An agency in which onboarding a new client is a guided, one-click ad-account connection; in which every telecaller works a single prioritised queue instead of a shared spreadsheet; in which account managers manage by exception (alerts) rather than by manual monitoring; and in which clients need never ask "how are my ads doing?" because the answer is always one login away.

8 Current Business Process (As Implemented)

The following describes the end-to-end operational process as the platform now supports it.

8.1 Client onboarding

An account manager registers the client (name, place, industry, GST, onboarding date, assigned staff), then uses one-click wizards to attach the Google Ads customer ID and the Meta ad account & page. The system immediately begins pulling historical campaigns, spend and leads in the background. The manager optionally enables the portal and issues the client's first admin credentials.

8.2 Automated data acquisition

On a recurring schedule (Google every ~15 min; Meta every ~15 min, offset by 5 min to avoid contention), the platform synchronises campaigns, ad sets, ads, daily insights, lead forms and leads. Meta leads additionally arrive in **real time** via signed webhooks, with a polling safety-net and a retry queue for any that fail first-pass processing. Every advertising spend figure is reconciled into the billing ledger and debited from the client's balance.

8.3 Lead handling & telecalling (the daily core)

Telecallers work the leads table (agency side) or the portal telecalling sheet. For each lead they record the call label (CONNECTED, BUSY, RNA, SWITCH OFF...), the response (HOT, WARM, COLD, CONSULTED, TREATMENT BOOKED...), remarks, appointments and follow-up attempts. The platform automatically suggests the next reminder date based on the outcome, appends call history, and flags leads as DARMANT (dormant) after five consecutive unconnected attempts.

8.4 Monitoring, reporting & billing oversight

Account managers watch the agency dashboard for low balances and "spending but zero leads" conditions. Clients and managers read the live EOD (end-of-day) report — day and month target-vs-achieved, appointment pipeline, source breakdown — and the Monthly Abstract grid. Managers add client payments (which credit the ledger) and periodically reconcile the CRM balance against the platform's reported balance.

Stage	Primary Actor	System Support
Onboarding	Account Manager / Admin	Client master, ad-account wizards, historical backfill
Data acquisition	System (automated)	Scheduled sync, webhooks, retry queue, billing reconciliation
Telecalling	Telecaller	Lead queue, telecalling sheet, follow-up automation

Reporting	Client Admin / Manager	Live dashboard, EOD report, Monthly Abstract, exports
Billing	Admin / Superadmin	Payments, ledger, reconciliation, low balance alerts

9 Existing Business Challenges (Addressed by the Platform)

These are the operational pain points that justified the platform. Each maps to capabilities now delivered.

Challenge	Impact before	How the platform addresses it
Fragmented data across dashboards & spreadsheets	No cross-client view; hours lost switching logins; numbers disagreed	Unified multi-tenant database; one dashboard across the whole book of business
Manual, error-prone telecalling logs	Missed follow-ups, inconsistent statuses, lost history	Structured telecalling sheet with validation, auto-history, auto-reminders, DARMANT rule
Silent lead loss	Leads Meta delivered never reached the team; no one knew	Immutable raw-lead audit log, retry queue, and an <i>ingestion-gap diagnostic</i> that surfaces missing leads
Budget overspend / ads auto-pausing	Ads stopped without warning when balances ran out; clients unhappy	Real-time balance tracking, low-balance alert bell, Balance Watch board
Billing disputes	Ad spend vs. funds tracked informally; hard to prove	Immutable, idempotent billing ledger with per-day reconciliation snapshots
Client status requests	Constant "how are my ads doing?" emails/calls	Self-service client portal with live dashboards and reports
Inconsistent reporting numbers	Different pages showed different lead counts	Single metrics service defines every KPI once, used by all surfaces
Onboarding friction	Ad-account connection needed developer/cURL help	One-click Google & Meta connection wizards

10 Project Objectives

The platform's objectives, each with a business rationale. Measurable targets appear in Section 28 (Success Metrics).

Ref	Objective	Business Rationale
OBJ-01	Centralise all client & campaign data	Eliminate spreadsheet fragmentation; provide one authoritative, cross-client operational view.
OBJ-02	Automate Meta & Google data acquisition	Remove manual data entry of spend and leads; keep numbers current without human effort.
OBJ-03	Guarantee lead capture & visibility	Ensure every paid-for lead is captured, auditable, and never silently lost.
OBJ-04	Digitise the telecalling workflow	Replace the shared spreadsheet with a validated, automated queue that preserves the existing process.
OBJ-05	Provide accurate, auditable billing	Maintain a defensible, idempotent ledger of every credit and debit per client.
OBJ-06	Protect ad budgets proactively	Alert before balances deplete so campaigns don't auto-pause unexpectedly.
OBJ-07	Give clients self-service transparency	Reduce reporting overhead and build trust via a secure client portal.
OBJ-08	Standardise reporting	One definition per KPI so every screen and export agrees.
OBJ-09	Enforce role-based security & tenancy	Ensure staff and clients see only what they are entitled to; isolate each client's data.
OBJ-10	Assist decisions with AI insights	Turn raw performance data into actionable, plain-language recommendations.

11 Business Scope

The platform's scope covers the complete operational lifecycle of an agency-managed advertising client: from onboarding and ad-account connection, through automated data acquisition and lead ingestion, into telecalling and appointment management, and out to reporting, client self-service and balance-based billing. It spans two integrated ad platforms (Meta and Google Ads), one AI advisory service (Google Gemini), and two authenticated user populations (agency staff and client-portal users).

Agency

INTERNAL CONSOLE — ALL CLIENTS

Client

SELF-SERVICE PORTAL — OWN DATA

Automated

SYNC, WEBHOOKS, BILLING, ALERTS

12 In Scope

- Agency staff authentication & role-based access management
- Client master data & lifecycle (onboard, drop, re-onboard, delete)
- Google Ads account connection & automated sync (campaigns, metrics, keywords)
- Meta account & page connection, one-click onboarding wizard
- Meta sync (campaigns, ad sets, ads, daily insights, lead forms)
- Real-time Meta lead ingestion (webhooks) + polling + retry queue
- Lead management (create, edit, assign, status, source attribution)
- Telecalling workflow — 26-column sheet, inline editing, follow-ups
- Follow-up automation, reminder suggestion, DARMANT dormancy rule
- Excel import/export of the telecalling workbook
- Manual lead entry (WhatsApp / walk-in / referral)
- Billing ledger — payments, spend debits, reconciliation, adjustments
- Ad-account balance tracking & low-balance alerting
- Dashboards — agency command centre & per-client deep dives
- Reporting — Daily Lead Data, Total Leads pivot, Ads Comparison, Analytics
- Client portal — live "today" dashboard, EOD report, Monthly Abstract
- Client-portal user management (admin / telecaller roles)
- AI campaign insights (Google Gemini)
- Credential vaults (client & personal)
- Content calendar / social post planner (module present)
- Observability of sync runs, retry queue and raw leads

13 Out of Scope

The following are explicitly outside the current platform scope and are noted so expectations are clear:

Item	Note
Ad creation / campaign editing on Meta or Google	The platform is read-oriented for ad data; campaigns are created & edited in the native ad managers. (Campaign-builder screens exist as non-live scaffolding only.)
Automated payment collection / payment gateway	Client payments are recorded manually; no online payment processing is integrated.

Email campaign execution	The "Email Campaigns" screen is a mock/placeholder; no email sending engine is wired.
ARA Lead Matrix CRM — Business Requirements Document · v1.0 Invoicing & formal accounting	CONFIDENTIAL Billing is a balance ledger, not a tax-invoicing / GST-filing system.
Native mobile applications	The product is a responsive web application; no iOS/Android app.
Automated financial/sales reports from removed fund source	Certain financial report endpoints are currently stubbed pending a replacement data source.
Telephony / dialer integration	Calls are placed outside the system; the platform logs outcomes, it does not dial.

14 Stakeholders

Parties with an interest in, or influence over, the platform.

Stakeholder	Type	Interest / Concern
Agency Management / Founder	Internal — Sponsor	Profitability, client retention, operational efficiency, strategic direction.
Head of Operations	Internal	Smooth daily running, telecalling productivity, staff accountability.
Performance Marketing Managers (PMM)	Internal — Primary user	Campaign results, CPL control, budget health across clients.
Social Media Managers (SMM) / SME	Internal — User	Lead flow, content planning, client servicing.
Account Managers	Internal — User	Client onboarding, portal provisioning, balance management, reporting.
Agency Telecallers	Internal — User	Working leads, logging outcomes, hitting call/consult targets.
Client Business Owners (Clinics)	External — Sponsor/User	Transparent ROI, lead volume & quality, spend accountability.
Client Telecallers	External — Primary user	Efficient lead handling on the portal telecalling sheet.
Meta & Google Platforms	External — Provider	API terms compliance, rate limits, data access permissions.
Engineering & QA Team	Internal — Delivery	Maintainability, reliability, security, data integrity.

15 User Personas

Persona A — "Priya", Agency Account Manager / Admin

Goals	Onboard clients quickly, keep every ad account funded and performing, provide clients transparent results.
Daily use	Opens the agency dashboard; scans Balance Watch for low balances; drills into flagged clients; adds payments; provisions portal logins.
Frustrations solved	No more spreadsheet juggling or surprise ad pauses; alerts surface problems before clients notice.
Key screens	Dashboard, Clients, Client Ad Details, Client Portal Access, Payments/Billing.

Persona B — "Ravi", Performance Marketing Manager

Goals	Drive leads at target CPL; identify under-performing campaigns; justify spend with data.
Daily use	Compares clients on Ads Comparison; studies per-client analytics & spend trends; requests AI insights for problem accounts.
Key screens	Ads Comparison, Analytics, Client Ad Details, AI Insights panel.

Persona C — "Meena", Client-Side Telecaller

Goals	Call every fresh lead, log outcomes accurately, book consultations, never miss a follow-up.
Daily use	Logs into the client portal; opens the telecalling sheet filtered to today's due leads; calls, logs response, books appointments, adds follow-ups.
Frustrations solved	Auto-reminders and history mean no manual spreadsheet upkeep; the queue tells her exactly who to call.
Key screens	Client Portal — Today dashboard, Leads sheet, EOD report.

Persona D — "Dr. Anand", Client Business Owner / Portal Admin

Goals	See the return on advertising spend; verify leads are being worked; manage his telecaller accounts.
Daily use	Checks the portal's live today dashboard and EOD report; reviews Google/Meta spend and CPL; adds or resets telecaller logins.
Key screens	Client Portal — Dashboard, Google Ads, Meta Ads, EOD/Monthly Abstract, Users.

Persona E — "Sanjay", Superadmin / Platform Administrator

Goals	Full control of users, roles, integrations and billing integrity.
Daily use	Manages staff accounts and permissions, oversees sync health, performs billing reconciliation and adjustments.
Key screens	Access Management, Billing, sync observability, all client data.

16 User Roles

The platform enforces **two independent role systems** across two authentication realms.

16.1 Agency staff roles (internal console)

Agency roles are flexible: **superadmin** and **admin** are hard-coded as full-access; all other role names are administrator-defined and driven entirely by an explicit permission list. Page and API permissions are two layers of the same model.

Role	Access Level	Default Capabilities
Superadmin	Unrestricted (root)	Everything. Only role that can manage other superadmins; cannot be deleted or assigned from the UI.
Admin	Full data & user access	All pages and permissions; user administration, billing, all clients.
PMM (Performance Marketing Manager)	Marketing operations	Lead CRUD (no delete), client create/read/update, funds create/read/update, daily entries, reports (view + export).
SMM (Social Media Manager) — default	Servicing & content	Lead create/read/update, client read, funds read, daily entries, content create/read/update, report view.
Staff (legacy)	Limited	Lead create/read/update, client read, funds read, entry read, report view.
Custom roles	As granted	Any combination of sidebar-page and API permissions assigned in Access Management.

16.2 Client-portal roles (external portal)

Role	Access Level	Capabilities
Client Admin	Full portal (own client only)	Google Ads, Meta Ads, billing balance, leads/telecalling, EOD & Monthly reports, and the Users tab to manage portal logins.
Telecaller (default)	Lead handling only	Today dashboard, Leads/telecalling sheet, EOD report. Ad spend & billing are hidden.

Tenant isolation. A client-portal user's client identity is always taken from their secure session token, never from the request — so a portal admin can never see or manage another client's data or users. Cross-client requests are rejected.

16.3 Permission enforcement summary

Layer	Mechanism
Authentication	Stateless JWT (header or secure cookie); bcrypt-hashed passwords; active-account check on every request.

Agency authorisation	Role check (superadmin/admin bypass) + explicit API permission + page-permission mapping fallback.
ARA Lead Matrix CRM — Business Requirements Document · v1.0 Portal authorisation	CONFIDENTIAL Role gate (admin vs telecaller) + strict tenant scoping on every client-scoped route.

17 Functional Areas

The platform's capabilities group into ten functional areas.

#	Functional Area	Description
1	Identity & Access	Agency and client authentication, roles, permissions, user administration, tenant isolation.
2	Client Lifecycle Management	Onboarding, master data, drop/re-onboard, deletion, staffing, portal provisioning.
3	Ad-Platform Integration	Google Ads & Meta connection, scheduled sync, webhooks, rate-limit handling, observability.
4	Lead Management	Lead capture (form/WhatsApp/manual), attribution, status, assignment, duplicate handling.
5	Telecalling & Follow-up	Telecalling sheet, call/response logging, follow-up automation, DARMANT rule, Excel round-trip.
6	Billing & Financial Ledger	Payments, spend debits, reconciliation, adjustments, balance tracking, low-balance alerts.
7	Reporting & Analytics	Dashboards, EOD report, Monthly Abstract, Ads Comparison, per-client analytics, exports.
8	Client Self-Service Portal	Live today dashboard, own-account ad performance, leads, reports, user management.
9	Intelligence & Assistance	AI campaign insights, ingestion-gap diagnostics, smart operational alerts.
10	Security & Supporting Tools	Credential vaults, content calendar, encryption, audit trails, rate limiting.

18 Complete Module List

ARA Lead Matrix CRM — Business Requirements Document - v1.0

CONFIDENTIAL

AR

Every module in the platform, its purpose, and its primary users. Detailed feature descriptions follow in Section 23.

#	Module	Realm	Primary Users	Purpose
M01	Authentication & Session	Both	All users	Secure login for agency & portal; JWT sessions; password security.
M02	Access Management	Agency	Admin / Superadmin	Create staff, assign roles & page/API permissions, activate/deactivate.
M03	Client Management	Agency	Admin, PMM, Account Mgr	Client master, onboarding, drop/re-onboard, delete, staffing.
M04	Client Portal Access / Provisioning	Agency	Admin	Enable portal per client, seed admin login, reveal/reset password.
M05	Google Ads Integration	Agency	Admin, PMM	Connect customer ID, sync campaigns/metrics/keywords, validate.
M06	Meta Ads Integration	Agency	Admin, PMM	Connect ad account & page, sync entities/insights/forms, webhooks.
M07	Lead Management	Both	Telecaller, SMM, PMM	Capture, attribute, assign, status, edit, delete manual leads.
M08	Telecalling Sheet & Automation	Both	Telecaller	26-column sheet, inline edit, follow-ups, reminders, DARMANT, import/export.
M09	Daily Lead Data / Daily Entry	Agency	SMM, PMM	Per-day per-client lead & spend capture and roll-ups.
M10	Billing & Payments	Agency	Admin / Superadmin	Record payments, ledger, reconcile, adjust, reset balances.
M11	Balance Monitoring & Alerts	Both	Admin, Client Admin	Live ad-account balances, low-balance bell, Balance Watch board.
M12	Agency Dashboard	Agency	Admin, PMM, SMM	Cross-client command centre; spend, leads, CPL, alerts, activity.
M13	Client Ad Details	Agency	Admin, PMM	Per-client deep dive: Google, Meta, EOD, leads, AI insights.
M14	Ads Comparison	Agency	PMM, Admin	Side-by-side multi-client Google & Meta performance.
M15	Analytics & Reports	Both	PMM, Admin, Client Admin	Trends, per-client reports, billing ledger, spend overview.
M16	Total Leads Pivot	Agency	PMM, SMM	Month-tabbed pivot of leads by client & day.
M17	EOD Telecalling Report	Both	Telecaller, Client Admin	Day/month target-vs-achieved, appointment pipeline, summary.
M18	Monthly Abstract	Both	Client Admin, Manager	Per-day monthly grid of source, calls, appointments, conversions.
M19	Client Portal — Today	Portal	All portal users	Live snapshot of today's leads, calls, appointments, conversions.
M20	Client Portal — User Management	Portal	Client Admin	Create/edit/deactivate telecaller & admin logins.

M21	AI Campaign Insights	Agency	PMM, Admin	Gemini-generated strategy, grade, strengths, red-flags.
ARA Lead	Matrix CRM — Business Requirements Document - v1.0			
M22	Client Credential Vault	Agency	Admin, Staff	CONFIDENTIAL Encrypted store of client platform logins.
M23	Personal Vault	Agency	Staff	Personal encrypted credentials with sharing.
M24	Content Calendar	Agency	SMM / SME	Plan & track social posts per client (Reel/Static/Carousel).
M25	Sync Observability	Agency	Admin	Sync run history, retry queue, raw-lead audit, health.

19 Business Requirements

ARA Lead Matrix CRM — Business Requirements Document - v1.0

CONFIDENTIAL

AR

Numbered, testable business requirements grouped by functional area. Priority: Must Should Could

19.1 Identity & Access

ID	Requirement	Priority
BR-IA-01	The system shall authenticate agency staff by email and password, issuing a secure, expiring session token.	Must
BR-IA-02	The system shall authenticate client-portal users by username or email and password, scoped to a single client.	Must
BR-IA-03	The system shall store all passwords hashed (bcrypt) and never expose them in plaintext except the deliberate admin portal-password recovery feature.	Must
BR-IA-04	The system shall enforce role-based access for agency staff via role plus explicit page/API permissions.	Must
BR-IA-05	The system shall restrict client-portal users strictly to their own client's data (tenant isolation).	Must
BR-IA-06	The system shall allow administrators to create, edit, activate/deactivate and delete staff users and assign granular permissions.	Must
BR-IA-07	The system shall rate-limit login attempts to deter brute-force attacks.	Should
BR-IA-08	The system shall prevent removal or demotion of the last active administrator for any client portal.	Must

19.2 Client Lifecycle

ID	Requirement	Priority
BR-CL-01	The system shall maintain a client master (name, place, industry, address, GST, onboarding date, staffing, currency, timezone).	Must
BR-CL-02	The system shall support soft-drop of a client with a recorded reason and reversible re-onboarding, preserving all history.	Must
BR-CL-03	The system shall support hard-deletion of a client that cascades to all related records with per-collection reporting.	Should
BR-CL-04	The system shall hide dropped clients from operational lists by default while retaining them for audit.	Must
BR-CL-05	The system shall let administrators enable a client portal and seed the client's first admin login.	Must
BR-CL-06	The system shall provide full-text search across clients by name, place, industry and account identifiers.	Should

19.3 Ad-Platform Integration

ID	Requirement	Priority
BR-AD-01	The system shall connect a client to Google Ads via a validated 10-digit customer ID and sync campaigns, daily metrics and keywords.	Must
BR-AD-02	The system shall connect a client to Meta via a validated ad-account ID and Facebook page(s) using a one-click wizard.	Must
BR-AD-03	The system shall sync Meta campaigns, ad sets, ads and daily insights at campaign/adset/ad levels on a recurring schedule.	Must

BR-AD-04	The system shall receive Meta leads in real time via signature-verified webhooks, with polling and a retry queue as safety-nets.	Must
ARA Lead Matrix BR-AD-05	CRM — Business Requirements Document · v1.0 CONFIDENTIAL The system shall backfill historical data (up to ~90 days) on client onboarding without re-pulling other clients.	Should
BR-AD-06	The system shall respect ad-platform rate limits and isolate per-client failures so one broken account never halts a sync run.	Must
BR-AD-07	The system shall record each sync run with counts and errors for observability, and recover from interrupted runs.	Should
BR-AD-08	The system shall encrypt Facebook page access tokens at rest.	Must

19.4 Lead & Telecalling

ID	Requirement	Priority
BR-LT-01	The system shall capture leads from Meta forms, click-to-WhatsApp, and manual entry with correct source attribution.	Must
BR-LT-02	The system shall process each Meta lead idempotently so no lead is duplicated or lost.	Must
BR-LT-03	The system shall present leads on a 26-column telecalling sheet matching the operator's existing workbook, editable inline.	Must
BR-LT-04	The system shall record call outcomes, responses, remarks, appointments and multiple follow-up attempts per lead.	Must
BR-LT-05	The system shall auto-suggest the next reminder date based on call/response outcome.	Should
BR-LT-06	The system shall auto-flag a lead as DARMANT after five consecutive unconnected attempts with no connection.	Should
BR-LT-07	The system shall import and export the telecalling workbook (Excel) with data cleaning and history preservation.	Must
BR-LT-08	The system shall prevent deletion of synced Meta-form leads while allowing deletion of manual entries.	Must
BR-LT-09	The system shall surface an ingestion-gap diagnostic showing leads Meta reported but the CRM did not receive.	Should
BR-LT-10	The system shall enforce a unique contact number per client while allowing the same number across different clients.	Must

19.5 Billing & Financial

ID	Requirement	Priority
BR-BL-01	The system shall record every client payment as an immutable credit ledger entry and increase the client's balance.	Must
BR-BL-02	The system shall debit ad spend from the client's balance via idempotent, delta-based ledger entries per client/campaign/day.	Must
BR-BL-03	The system shall never allow billing balances to be edited through generic client update — only via payments, reconcile or reset.	Must
BR-BL-04	The system shall reconcile CRM balances against ad-platform reported balances and log any adjustment.	Should
BR-BL-05	The system shall alert staff and clients when an ad-account balance falls below a configurable threshold.	Must
BR-BL-06	The system shall maintain a full billing ledger and balance timeline available for review per client.	Should

19.6 Reporting, Portal & Intelligence

Lead Matrix Requirements Requirements Document - v1.0		CONFIDENTIAL	Priority	AP
BR-RP-01	The system shall present an agency command dashboard summarising spend, leads, CPL and balance health across all clients.		Must	
BR-RP-02	The system shall define every KPI once (single metrics service) so all screens and exports agree.		Must	
BR-RP-03	The system shall provide a live EOD report with day/month targets-vs-achieved and an appointment pipeline.		Must	
BR-RP-04	The system shall provide a Monthly Abstract grid with editable manual-override cells.		Should	
BR-RP-05	The system shall let clients self-serve a live today dashboard, their ad performance, leads and reports.		Must	
BR-RP-06	The system shall export reports and lead data to Excel and PDF.		Must	
BR-RP-07	The system shall auto-refresh live views approximately every 30 seconds.		Should	
BR-RP-08	The system shall generate AI campaign insights (summary, grade, strengths, improvements, strategies, red-flags) on demand.		Could	

20 Business Rules

Invariant rules the system enforces regardless of user action.

Rule ID	Rule	Rationale
RULE-01	Superadmin and admin roles bypass all agency permission checks.	Operational necessity for platform administration.
RULE-02	A portal user's client is derived from their token, never the request.	Prevents cross-tenant data access (IDOR protection).
RULE-03	Meta lead processing is idempotent on the lead's unique Meta ID.	Guarantees no duplicate or lost leads across webhook + poll.
RULE-04	A contact number is unique within a client but may repeat across clients.	Same person may be a lead for multiple clinics legitimately.
RULE-05	Synced Meta-form leads cannot be deleted; only manual leads can.	Protects the auditable record of paid-for leads.
RULE-06	A lead flips to DARMANT after 5 consecutive not-connected attempts with no connection.	Standardises dormancy so effort isn't wasted on unreachable leads.
RULE-07	Next-reminder date is auto-set by outcome: BUSY→+1h; RNA→other half-day; SWITCH OFF/NOT CONNECTED→tomorrow; HOT/WARM/COLD→+2/+7/+30 days; APPOINTMENT BOOKED→day before appointment; CLOSED/INVALID/DUPLICATE→cleared.	Removes manual scheduling and enforces consistent cadence.
RULE-08	WhatsApp leads are counted only on ad sets optimised for CONVERSATIONS.	Prevents phantom WhatsApp leads from stray messages on form ads.
RULE-09	Reported lead counts come from Meta insights, never from CRM records alone.	Avoids under-reporting when ingestion is temporarily broken.
RULE-10	Every ledger entry carries an idempotency key; duplicate keys are rolled back.	Concurrent sync runs can never double-charge a client.
RULE-11	Billing balances are ledger-owned and never editable via client update.	Keeps the financial record defensible and tamper-resistant.
RULE-12	Sync windows are floored at the client's onboarding date.	Never pulls or bills pre-onboarding activity.
RULE-13	Meta billing runs in dry-run mode by default (no writes until enabled).	Financial safety switch during rollout/testing.
RULE-14	Dropped clients are excluded from live lists but retained with full drop history.	Reversible off-boarding without data loss.
RULE-15	The last active portal admin cannot be deleted, demoted or deactivated.	Prevents a client from being locked out of user management.
RULE-16	Legacy portal tokens without a user identity default to least privilege (telecaller).	Closes a prior privilege-escalation gap.

RULE-17	All monetary values are INR; the business day is calculated in IST.	Correct daily roll-ups for an India-based operation.
ARA Lead Matrix CRM — Business Requirements Document · v1.0 RULE-18	Telecalling sheet values are validated against the exact spreadsheet vocabulary.	CONFIDENTIAL Guarantees clean Excel round-trip and consistent reporting.

AR

21 High-Level Process Flows

ARA Lead Matrix CRM — Business Requirements Document - v1.0

CONFIDENTIAL

AR

21.1 Client onboarding & activation

21.2 Automated data acquisition & billing

21.3 Real-time lead ingestion

Failures are enqueued to a retry queue with exponential backoff (1m → 5m → 15m → 1h → 6h → abandoned). A poller independently re-checks each form for any leads a webhook may have missed.

21.4 Telecalling day cycle

21.5 Payment & reconciliation

22 Workflow Diagrams

22.1 Lead lifecycle state model

State	Entered when	Typical next states
New / Fresh	Lead arrives (form/WhatsApp/manual)	Contacted, Duplicate, Invalid
Contacted	First call logged	HOT / WARM / COLD, Appointment Booked, DARMANT
HOT / WARM / COLD	Response captured	Appointment Booked, Consulted, Closed
Appointment Booked	Appointment status set	Visited, Rescheduled, Not Visited
Consulted	Response = CONSULTED	Treatment Booked (Converted), Closed
Treatment Booked / Converted	Response = TREATMENT BOOKED / CLOSED	— (won)
DARMANT (dormant)	5 unconnected attempts	Re-engaged → Contacted, or Closed
Duplicate / Invalid / Lost	Marked by telecaller / rules	— (closed)

22.2 Two-realm access model

Realm	Login	Roles	Sees
Agency Console	/login (email)	Superadmin, Admin, PMM, SMM, Custom	All clients, per assigned permissions
Client Portal	/client-login (username/email)	Client Admin, Telecaller	Own client only; telecaller sees leads/reports only

22.3 Meta lead ingestion — resilience path

22.4 Billing reconciliation loop

Step	Action	Ledger effect
1	Read platform-reported spend per campaign/day	—
2	Compare to prior debit snapshot	—
3	Positive delta	Debit (spend)
4	Negative delta (platform revised down)	Credit (refund)
5	Manual client payment	Credit (funds added)
6	Reconcile vs live balance	Admin adjustment if gap $\geq$ ₹0.01

Note: These textual flow tables represent the platform's process logic. Formal swim-lane diagrams can be produced as an annex on request; the structure above is diagram-ready.

23 Feature Descriptions

Narrative descriptions of every module (cross-referenced to Section 18).

M01 • Authentication & Session

Two independent, secure login experiences share one design system. Agency staff sign in with email/password; clients and telecallers sign in with username or email. Sessions are stateless tokens carried in a secure cookie or header; passwords are bcrypt-hashed. Login endpoints are rate-limited. The portal login self-heals legacy accounts by seeding a modern admin user transparently on first sign-in.

M02 • Access Management

Administrators create staff accounts (auto-numbered as USR001, USR002...), assign a role, and grant granular permissions through a picker that mirrors the sidebar. Admin/superadmin get full access; custom roles get exactly what is ticked. Users can be activated, deactivated, have passwords reset, and be deleted (with superadmin protections).

M03 • Client Management

The client master captures identity, staffing, currency/timezone and integration configuration. Clients can be onboarded, soft-dropped (with reason and reversible re-onboarding), hard-deleted (cascading across all related collections), and searched full-text. Billing fields are deliberately read-only here — they are owned by the ledger.

M04 • Client Portal Access

A provisioning console where administrators enable the portal per client, seed the first admin email/password, reveal a saved password when a client forgets it, and copy the client login URL. Summary tiles show total portals, active portals and pending setups.

M05 • Google Ads Integration

Connects a client via a validated 10-digit customer ID and synchronises campaigns, per-day campaign metrics (impressions, clicks, cost, conversions, impression share, click-type breakdown) and keyword-level performance. KPIs (CTR, CPC, CPA, conversion rate, ROAS) are enriched on each metric. Spend is reconciled into the billing ledger.

M06 • Meta Ads Integration

A one-click wizard attaches a Meta ad account and Facebook page. The platform syncs campaigns, ad sets, ads and daily insights at three levels, plus lead-generation form definitions. Leads arrive in real time via signature-verified webhooks (with polling and a retry queue). Page access tokens are encrypted at rest; unmapped forms surface to an admin queue for assignment.

M07 • Lead Management

Leads are captured from Meta forms, click-to-WhatsApp, and manual entry, with full source/UTM attribution and the raw payload retained. Leads carry status, assignment, category (HAIR/SKIN), location and duplicate flags. Processing is idempotent so nothing is duplicated or lost.

M08 · Telecalling Sheet & Automation

The heart of the daily operation: a 26-column Excel-style sheet identical to the team's real workbook.

Telecallers edit inline with auto-save; the system validates every value against the sheet vocabulary, auto-appends call history, auto-suggests the next reminder, and flips leads to DARMANT after five unconnected attempts. Work queues (due today, fresh, etc.) prioritise effort, and the sheet imports/exports the real Excel file (with data cleaning on import).

M09 · Daily Lead Data / Daily Entry

Per-day, per-client capture and roll-up of Meta and Google lead counts and spend, with auto-calculated totals and CPL, plus an agency-wide daily aggregate. "By Client" and "Lead Check" views support daily/weekly/monthly toggles.

M10 · Billing & Payments

Administrators record client payments (credits) and the platform debits ad spend automatically. Every entry is immutable and idempotent, carrying a running balance. Tools include reconciliation against the ad platform, admin adjustments, deep historical sync, and a guarded destructive reset.

M11 · Balance Monitoring & Alerts

Live ad-account balances are cached for fast reads. A header alert bell flags Meta accounts running low; a Balance Watch board buckets clients into Critical / Warning / Healthy so ads never auto-pause unnoticed.

M12 · Agency Dashboard

The performance-marketing command centre: date-scoped, per-client Meta and Google spend, leads, CPL and balance, with smart alerts ("low balance", "spending but zero leads"), recent activity, and top-performer ranking. Clicking any client drills into its detail page.

M13 · Client Ad Details

A single-client deep dive with Google Ads, Meta Ads and EOD tabs — account info, billing, KPI grids, spend-trend charts, campaigns with expandable keywords, the full leads table, live resync, exports and an AI insights panel.

M14 · Ads Comparison

Side-by-side performance of every linked client across Google and Meta tabs, with KPI cards, charts, rankings (top performer, best value, needs review) and a shared date range and search.

M15 · Analytics & Reports

Per-client trend analysis, daily and monthly overviews, day-over-day change, a full billing ledger with balance timeline, and today/yesterday/week/month spend overviews — all in IST, all reading the shared metric definitions.

M16–M18 · Total Leads, EOD Report & Monthly Abstract

Total Leads is a month-tabbed pivot of leads by client and day. The **EOD Report** mirrors the team's Google Sheet exactly — day and month target-vs-achieved, appointment pipeline (yesterday → +5 days), and a day summary with source breakdown and conversion block; targets are editable per client. The **Monthly**

Abstract is a per-day grid banded into source, status, calls and appointments/conversion columns, with ~~editable override cells.~~

M19–M20 · Client Portal (Today & Users)

The portal's live "today" view shows six KPI tiles and six source cards, every number clickable through to a filtered leads view, auto-refreshing ~30s. Client admins manage their own telecaller and admin logins, with last-admin and self-deletion protections.

M21 · AI Campaign Insights

On demand, the platform sends a performance snapshot to Google Gemini and returns a plain-language analysis: overall summary, an A–F grade, strengths, improvements, five actionable strategies to raise leads / lower CPL, urgent red-flags and KPIs to watch — with graceful degradation if the AI service is unavailable.

M22–M25 · Vaults, Content Calendar & Observability

Encrypted **client and personal credential vaults** store platform logins (personal entries support sharing). A **content calendar** plans and tracks social posts per client (Reel/Static/Carousel) with an approval status. **Sync observability** exposes run history, the retry queue and the raw-lead audit for operational assurance.

24 Dependencies

External and internal dependencies the platform relies upon.

24.1 External dependencies

Dependency	Type	Nature of reliance
Meta Graph API	Ad platform	Campaign/insight/form/lead data; webhooks; page tokens. Subject to rate limits, permissions and API-version deprecation.
Google Ads API	Ad platform	Campaign, metric & keyword data via OAuth + developer token + MCC.
Google Gemini API	AI service	On-demand campaign insight generation.
MongoDB (Azure Cosmos DB)	Database	Primary datastore for all entities.
Facebook Business Manager access	Permission	Client must grant the agency access to their ad account/page before setup succeeds.
Cloud hosting (Azure)	Infrastructure	Application & scheduler runtime, HTTPS termination.

24.2 Internal / technical dependencies

Component	Role
Node.js + Express (ES modules)	Backend API & scheduler runtime.
React (SPA) + Redux Toolkit + MUI	Front-end for both realms.
Background sync scheduler	Recurring Google & Meta sync, retry worker, zombie-run cleanup.
Single metrics service	Canonical KPI definitions consumed by all reporting surfaces.
Encryption utility (AES) + bcrypt	Token/password/credential protection at rest.
Excel engine (ExcelJS)	Telecalling workbook import/export.

25 Assumptions

ID	Assumption
AS-01	Clients grant and maintain the agency's Business Manager access to their Meta ad accounts and pages.
AS-02	Valid, non-expired API credentials (Meta system-user & page tokens, Google OAuth refresh token, Gemini key) are configured and maintained.
AS-03	All clients operate in INR and on the IST business day; multi-currency is not required.
AS-04	Telecallers place calls outside the platform and log outcomes into it (no integrated dialer).
AS-05	Client payments are received through existing channels and recorded by an administrator.
AS-06	Ad campaigns are created and managed in the native ad managers, not in this platform.
AS-07	Users access the platform via a modern web browser with connectivity; brief offline periods are tolerated.
AS-08	The existing telecalling spreadsheet vocabulary remains the operational standard the sheet must match.
AS-09	Meta reported insights are treated as the authoritative source for lead-count reporting.
AS-10	Adequate rate-limit headroom exists on the ad platforms for the current client volume and sync cadence.

26 Constraints

ID	Constraint
C0-01	Ad-platform API rate limits cap sync frequency; clients are synced sequentially and cadences are staggered.
C0-02	Meta pins a specific API version; version deprecation requires a maintenance upgrade.
C0-03	Meta requires webhook acknowledgement within a few seconds, forcing asynchronous lead processing.
C0-04	Historical backfill is bounded (≈ 90 days) to conserve API quota.
C0-05	The telecalling sheet must remain a faithful 26-column match to the operator's Excel workbook.
C0-06	Live financial writes depend on the Meta billing dry-run switch being deliberately disabled.
C0-07	The platform is delivered as a responsive web application; no native mobile app.
C0-08	Reporting currency and business-day logic are fixed to INR / IST.
C0-09	Some financial-report endpoints are stubbed pending a replacement fund data source.

27 Risks

Key risks with likelihood, impact and mitigation. High Medium Low

ID	Risk	Likel.	Impact	Mitigation
RK-01	Meta/Google API token expiry or lost access halts sync & billing.	Med	High	Typed auth errors, per-client isolation, admin alerts, token-refresh procedures, graceful "billing unavailable" UI.
RK-02	API rate-limiting causes partial or delayed syncs.	Med	Med	Rate-limit header parsing, sequential sync, staggered cadence, exponential backoff, overlap guards.
RK-03	Lead ingestion failure silently loses paid-for leads.	Low	High	Raw-lead audit log, retry queue, polling safety-net, and an ingestion-gap diagnostic surfacing any shortfall.
RK-04	Billing miscalculation or double-charge damages client trust.	Low	High	Idempotent, delta-based ledger; dry-run default; reconciliation; immutable entries.
RK-05	Client credential vault is readable by any authenticated staff user.	Med	High	Recommended: add role/permission gating and access auditing to the vault module (see Roadmap).
RK-06	Ad-account balance depletes and campaigns auto-pause.	Med	Med	Low-balance bell, Balance Watch, configurable thresholds, dashboard alerts.
RK-07	Cross-tenant data exposure in the portal.	Low	High	Token-derived tenant identity, strict per-route scoping, least-privilege default for legacy tokens.
RK-08	Meta API version deprecation breaks integration.	Med	Med	Centralised field sets & version config; planned upgrade cadence.
RK-09	Third-party AI service downtime or cost.	Low	Low	Graceful degradation; feature is advisory, not operational.
RK-10	Data-entry inconsistency by telecallers.	Med	Low	Enum validation, dropdowns, import data-cleaning, automation.

28 Success Metrics

Measurable indicators of platform success, mapped to objectives (Section 10).

Metric	Target	Objective	How measured
Lead capture completeness	≥ 99% of Meta-reported leads present in CRM	OBJ-03	Ingestion-gap diagnostic (missing form leads = 0/near-0)
Data freshness	Cross-surface updates within ~30s; sync ≤ 15 min	OBJ-02	Live-view refresh & sync-run timings
Billing accuracy	Reconciliation gap ≤ ₹0.01 per client	OBJ-05	Ledger vs platform balance reconciliation
Budget protection	Zero unplanned ad auto-pauses due to unseen low balance	OBJ-06	Low-balance alerts actioned before depletion
Telecalling productivity	Daily consult & call targets met per client	OBJ-04	EOD report target-vs-achieved
Cost per lead (CPL)	At or below client target CPL	OBJ-01	Dashboard & analytics CPL
Conversion rate	Improving consulted → treatment-booked ratio	OBJ-04	Lead status analytics
Client self-service adoption	Majority of active clients logging into the portal	OBJ-07	Portal login activity
Reporting consistency	Zero KPI discrepancies across screens	OBJ-08	Shared metrics service; QA reconciliation
Onboarding time	New client live within one working session	OBJ-01	Wizard completion to first data

29 Acceptance Criteria

Representative acceptance criteria in Given–When–Then form. Each maps to a business requirement.

Maps to	Acceptance Criterion
BR-IA-05	Given a logged-in client-portal user, when they request data for a client that is not their own, then the system denies the request (403) and returns no data.
BR-AD-02	Given an admin on the Clients page, when they enter a valid Meta ad-account ID and select a page, then the client is connected and a historical sync begins automatically.
BR-AD-04	Given a valid signed Meta webhook, when a lead event is received, then the system acknowledges within seconds and the lead appears in the telecaller queue shortly after.
BR-LT-02	Given the same Meta lead delivered twice (webhook + poll), when both are processed, then exactly one lead record exists.
BR-LT-06	Given a lead with five consecutive not-connected attempts and no connection, when the fifth is saved, then the lead is flagged DARMANT.
BR-LT-08	Given a synced Meta-form lead, when a user attempts deletion, then the system prevents it; a manual lead may be deleted with confirmation.
BR-BL-02	Given a campaign's reported spend for a day, when reconciliation runs more than once, then the client balance is debited exactly once for that day's amount.
BR-BL-05	Given an ad account below its low-balance threshold, when staff view the console, then the alert bell and Balance Watch flag the account.
BR-RP-02	Given a client's lead count, when viewed on the dashboard, analytics and export, then all three show the identical figure.
BR-LT-07	Given the operator's Excel telecalling workbook, when imported, then rows upsert by contact, dirty values are cleaned and reported, and existing follow-up history is preserved.
BR-CL-02	Given a dropped client, when re-onboarded, then the client returns to active with full prior history intact.
BR-IA-08	Given a client with one active portal admin, when deletion/demotion of that admin is attempted, then the system blocks it.

30 Future Roadmap

Indicative forward direction, informed by the current platform state and known gaps.

Near term (0–3 months)

Item	Description
Harden credential vault	Add role/permission gating and access auditing to the client credential vault (addresses RK-05).
Complete client-portal ads view	Finalise the client-facing spend/leads/CPL view for all clients (already largely delivered).
Onboard remaining clients	Bring the full client roster through the Meta/Google connection wizards.
Enable live Meta billing	Graduate Meta billing from dry-run to live after validation.
Restore financial reports	Reconnect stubbed financial/sales reports to a replacement fund data source.

Medium term (3–6 months)

Item	Description
Refresh-token rotation	Wire a token-refresh exchange for longer, safer sessions.
Automated payment intake	Optional payment-gateway integration to auto-credit balances.
Deeper AI advisory	Trend-aware, cross-client AI recommendations and anomaly detection.
Notification channels	Email/WhatsApp alerts for low balance, appointment reminders, dormant leads.
Content module activation	Promote the content calendar and campaign tooling from scaffolding to live.

Longer term (6–12 months)

Item	Description
Additional ad channels	Extend integration beyond Meta & Google (e.g. YouTube, LinkedIn).
Telephony / dialer integration	Click-to-call and automatic call-outcome capture.
Native mobile experience	Telecaller-focused mobile app for on-the-go lead handling.
Formal invoicing & GST	Tax-compliant invoicing atop the billing ledger.
Multi-currency & multi-region	Support agencies operating beyond INR/IST.

31 Glossary

Term	Definition
Ad Account	The container on Meta or Google holding a client's campaigns and budget.
Ad Set / Ad Group	The audience & budget layer between a campaign and an ad (Google calls it an Ad Group).
BRD	Business Requirements Document — this document.
CPL	Cost Per Lead — ad spend divided by leads generated.
CPC / CPM / CTR	Cost Per Click / Cost Per Mille (thousand impressions) / Click-Through Rate.
Consulted	A lead who attended a consultation.
Conversion / Treatment Booked	A lead who became a paying customer (booked a treatment).
DARMANT	Dormant lead status auto-set after five consecutive unconnected call attempts (spelling retained from the source spreadsheet).
EOD Report	End-of-Day telecalling report: day/month targets-vs-achieved, appointment pipeline, day summary.
Form Lead	A Meta lead captured via a Lead Ad form.
Idempotent	An operation that produces the same result no matter how many times it runs — key to safe billing and lead processing.
Ingestion Gap	Diagnostic count of leads Meta reported that the CRM did not receive.
IST	Indian Standard Time (UTC+5:30) — the platform's business-day basis.
JWT	JSON Web Token — the stateless session credential.
Lead	A prospective customer who filled a form, messaged, or was entered manually.
Ledger / BillingTransaction	The immutable record of every credit and debit against a client's balance.
Monthly Abstract	Per-day monthly grid of source, calls, appointments and conversions.
Multi-tenant	One system serving many isolated clients from shared infrastructure.
PMM / SMM / SME	Performance Marketing Manager / Social Media Manager / Subject-Matter (content) Expert.
Reconciliation	Comparing the CRM ledger balance to the ad platform's reported balance and adjusting for any gap.
Resync / Backfill	Re-fetching historical ad data (up to ~90 days) from the platform.
Telecaller	The person who calls and qualifies leads.
Tenant Isolation	The control ensuring each client sees only its own data.
Webhook	A real-time push from Meta delivering a lead the instant it is submitted.
WhatsApp Lead	A lead from a click-to-WhatsApp ad (counted only on CONVERSATIONS-optimised ad sets).

Appendix A — Core Data Entities

The platform is built on 24 core data entities. The client entity is the operational hub; the user entity is the identity hub.

Entity	Business role
User	Agency staff identity, role & permissions.
Client	Central customer entity — integrations, billing, portal, targets.
ClientPortalUser	Per-client portal login (admin / telecaller).
Lead	Lead record + full telecalling workflow.
Campaign / Metric / Keyword	Google Ads master & daily performance facts.
MetaCampaign / MetaAdSet / MetaAd	Meta ad hierarchy masters.
MetaInsights	Meta daily performance facts (account/campaign/adset/ad).
MetaLeadForm / MetaLeadRaw	Lead-form definitions & immutable raw-lead audit.
MetaWebhookRetry / MetaSyncRun	Retry dead-letter queue & sync-run observability.
Payment / BillingTransaction	Client payments & immutable financial ledger.
DailyDebitSnapshot	Spend reconciliation snapshot per client/campaign/day.
DailyEntry / DailyLeadData	Per-client & agency-wide daily lead/spend roll-ups.
AbstractEntry	Manual override cells for the Monthly Abstract.
ContentEntry	Social content calendar entries.
Vault / PersonalVault	Encrypted client & personal credential stores.

Appendix B — API Module Map

API Area	Function
/auth · /client-portal	Agency & portal authentication and profile.
/users	Staff administration (admin only).
/clients	Client lifecycle & portal provisioning.
/leads · /meta (leads)	Lead management & telecalling sheet.
/meta · /google-ads	Ad-platform integration, sync & observability.
/metrics · /analytics	Performance aggregates & per-client analytics.
/daily-entries · /daily-lead-data	Daily capture & roll-ups.
/payments · /billing	Payments, ledger, reconciliation.
/reports	Dashboard, campaign, lead & user reports.
/content-entries	Content calendar.
/vault · /personal-vault	Credential vaults.

/ai	AI campaign insights.
-----	-----------------------

Appendix C — Telecalling Vocabulary (reference)

Field	Permitted values (source spreadsheet)
Source	WhatsApp, Instagram, Facebook, Google Lead, JustDial, Walk-in, Referral, Physical Marketing, Incall (Google/FB/Insta/Self)
Call Label	Connected, Invalid, Busy, Switch Off, Wrong Number, RNA, Duplicate, Disconnected, Not Connected
Response	Hot, Warm, Cold, DARMANT, Closed, Appointment Booked, Repeat, Invalid
Appointment Status	Booked, Booked-Visited, Booked-Not Visited, Rescheduled
Status	Hot, Warm, Cold, DARMANT, Closed, Follow-up
Category	Hair, Skin

Appendix D — Reference Documents

- ARA CRM Quick Guide & CRM Pro User Guide (operational manuals)
- Meta Ads Integration Plan & Status Report
- Google Ads Analytics API reference
- Meta API reference & sync notes
- Deployment & API documentation (backend)

End of Document. This Business Requirements Document represents the ARA Lead Matrix CRM platform as built and in production as of 17 July 2026. It is issued as version 1.0 (baseline) and is classified Confidential.
